

Add/customize brand into casafi6(client)

Casafi6 is web platform that is white label.

So we can add new brand or customize existing brand using env and white-label.config.js

Overview

We have white-label.config.js in project root that contains brand list.

Here we can specify site name, logo, icon, color pallet, and so on.

The brand can be selected by specifying VUE_APP_WHITE_LABEL_BRAND in corresponding .env file that is used for to build.

Customize brand

1. How to specify brand which app will be built for.

We can specify brand by setting VUE_APP_WHITE_LABEL_BRAND in the .env that is used for to build.

The value of VUE_APP_WHITE_LABEL_BRAND should exist as key in white-label.config.js.

For example:

Let's assume we need to build as local.mortgagecomposer.com with mortgagecomposer brand.

in this case, we use .env.local-mortgagecomposer-remote-go

in this env file we need to specify

VUE_APP_WHITE_LABEL_BRAND=mortgagecomposer

the value(mortgagecomposer) is just key in white-label.config.js

```
1 const whitelabelConfig = {
2   mortgagecomposer: {
3     site_name: "Mortgage composer",
4     custom_scss: "src/assets/brands/mortgage-composer/scss/custom.s",
5     brand_icon: "/img/brands/mortgage-composer/favicon.svg",
6     logo_image: "/img/brands/mortgage-composer/logo.svg"
7   },
8   domun: {
9     site_name: "Domun",
10    custom_scss: "src/assets/brands/domun/scss/custom.scss",
11    brand_icon: "/favicon.ico",
12    logo_image: "/img/brands/domun/logo.svg"
13  }
14 };
15
16 module.exports = whitelabelConfig;
17
```

```
4 VUE_APP_TITLE=Mortgage Composer App (remote go)
5 VUE_APP_BASE_URL=http://local.mortgagecomposer.com
6 VUE_APP_BASE_SERVER_URL=http://local.mortgagecomposer.com
7 VUE_APP_BASE_API_URL=https://qa-api.domun.co.uk
8 VUE_APP_MICROSERVICE_API_URL=http://local-api.mortgagecomposer.c
9 VUE_APP_DOC_PORT=7080
10 VUE_APP_API_PORT=7090
11 VUE_APP_JWT_KEY=cfcf12_+perflct
12 VUE_APP_ENABLE_JWT_HASH=false
13 VUE_APP_GA=UA-145588321-1
14 VUE_APP_ENABLE_POPUPS=true
15 VUE_APP_ENABLE_CONSOLE_LOGGING=true
16 VUE_APP_ENABLE_PRE_RENDER=false
17 HOUSE_PRICE_DATA=true
18 VUE_APP_DASHBOARD_TIMELINE=false
19 VUE_APP_ENABLE_AVM=false
20 VUE_APP_ENABLE_AVM_REPORT=true
21 VUE_APP_ENABLE_COMBINED_DASHBOARD=false
22 VUE_APP_INACTIVE_THRESHOLD_SECONDS=300
23 VUE_APP_ACTIVITY_THROTTLER_SECONDS=60
24 VUE_APP_USE_RANDOM_AVM_ON_LOGIN=false
25 VUE_APP_AVM_LIFE_DAYS=20
26 VUE_APP_WHITE_LABEL_BRAND=mortgagecomposer
```

2. You can specify site name by setting site_name field in corresponding brand in white-label.config.js.

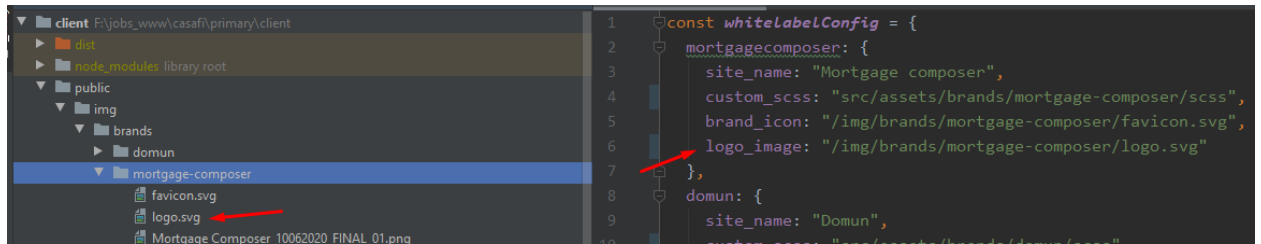

```
1 const whitelabelConfig = {
2   mortgagecomposer: {
3     site_name: "Mortgage composer",
4     custom_scss: "src/assets/brands/mortgage-composer/scss/custom.scss",
5     brand_icon: "/img/brands/mortgage-composer/favicon.svg",
6     logo_image: "/img/brands/mortgage-composer/logo.svg"
7   },
8   domun: {
```

3. You can specify brand icon by setting brand_icon field in corresponding brand in white-label.config.js.

We should be aware root path is public folder and brand icon source should be inside public folder

```
1 const whitelabelConfig = {
2   mortgagecomposer: {
3     site_name: "Mortgage composer",
4     custom_scss: "src/assets/brands/mortgage-composer/scss",
5     brand_icon: "/img/brands/mortgage-composer/favicon.svg",
6     logo_image: "/img/brands/mortgage-composer/logo.svg"
7   },
8   domun: {
9     site_name: "Domun",
10    custom_scss: "src/assets/brands/domun/scss",
11    brand_icon: "/favicon.ico"
```

4. Specifying Logo image is identical just like brand icon. Just specify in logo_image

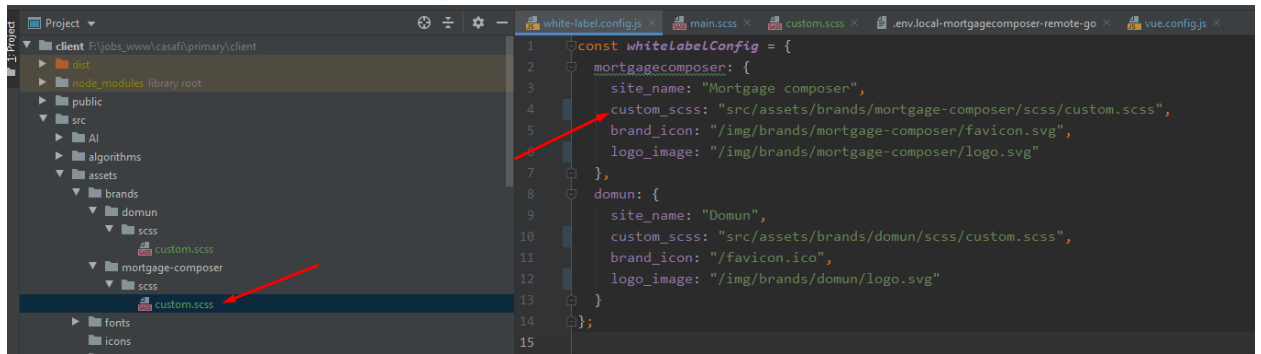

5. Customize specific style using `custom_scss` in corresponding brand in `white-label.config.js`

we will need to customize specific style per brand.

For example, we will need to have logo size a bit larger on mortgagecomposer brand.

That is why we have `custom_scss` field in `white-label.config.js`

Adding new brand

We can add new brand in `white-label.config.js` and specify that brand in used env.

Hope this will make sense 😊
